

1. A system comprising:

a first panel;

a second panel;

an ink pad coupled to one of said panels; and

5 a pivotable hinge, coupled to both of said first and second panels, for rotating the first panel with respect to the second panel between an open and a closed position, and also for rotating the first panel perpendicularly with respect to the second panel.

10 2. The system of claim 1 wherein the pivotable hinge further comprises a hinge mechanism coupled to at least one of the panels, a hinge bar seated inside the hinge mechanism, and a pivotable rod coupled to the first panel.

15 3. The system of claim 2 wherein the pivotable rod is fixedly coupled to the first panel.

4. The system of claim 3 wherein the pivotable rod further comprises a first end and a second end, the first end being fixedly coupled to the first panel, the second end being rotatably seated in a hole in said hinge bar.

20

5. The system of claim 3 wherein the pivotable rod further comprises a first end and a second end, the first end being fixedly coupled to the first panel, the second end being rotatably seated in a hole in said hinge mechanism.

5 6. The system of claim 2 wherein the pivotable rod is rotatably coupled to the first panel.

7. The system of claim 6 wherein the pivotable rod further comprises a first end and a second end, the first end being rotatably seated in a hole in the first panel, the second end
10 being fixedly coupled to said hinge bar.

8. The system of claim 6 wherein the pivotable rod further comprises a first end and a second end, the first end being rotatably seated in a hole in the first panel, the second end being fixedly coupled to said hinge mechanism.

15 9. The system of claim 1 wherein said first and second panels are rectangular, each panel having two long sides and two short sides, and wherein said pivotable hinge is coupled to one short side of the first panel and one short side of the second panel.

10. The system of claim 1 wherein said first panel further comprises a first axis about which it can rotate between said open and closed positions, and a second axis about which it can rotate perpendicularly with respect to the second panel, the first and second axes lying at an angle from each other.

11. A system comprising:

a first cover;

a second cover;

an ink pad coupled to the first cover; and

a pivotable hinge, coupled to both of said first and second covers, said first cover

further comprising a first axis about which it can rotate via the pivotable

hinge between open and closed positions, and a second axis about which it

can rotate, via the pivotable hinge, perpendicularly with respect to the

second cover, the first and second axes lying at an angle from each other.

12. The system of claim 11 wherein the pivotable hinge further comprises a hinge mechanism coupled to at least one of the covers, a hinge bar seated inside the hinge mechanism, and a pivotable rod coupled to the first cover.

13. The system of claim 12 wherein the pivotable rod is fixedly coupled to the first cover and rotatably coupled to the second cover.

14. The system of claim 11 wherein the pivotable rod further comprises a first end and a second end, the first end being fixedly coupled to the first cover, the second end being rotatably seated in a hole in said hinge bar.

15. The system of claim 11 wherein the pivotable hinge further comprises a pivotable rod rotatably coupled to the first cover and fixedly coupled to the second cover.

16. The system of claim 11 wherein the pivotable hinge further comprises a pivotable rod having a first end and a second end, the first end being rotatably seated in a hole in the first cover, the second end being fixedly coupled to a hinge bar.

17. The system of claim 11 wherein said first and second covers are rectangular, each cover having two long sides and two short sides, and wherein said pivotable hinge is coupled to one short side of the first cover and one short side of the second cover.

18. The system of claim 17 wherein said first axis is parallel and adjacent to the short sides coupled to the pivotable hinge, and the second axis is parallel to the long sides of the covers and runs centrally through the first cover.

19. A system comprising:
a first panel rotatable around a first axis and a second axis, the first and second axes
being angled from each other;
a second panel coupled to said first panel, the second panel being rotatable around
said first axis;
an ink pad coupled to one of said panels; and
means for rotating said first panel around the first axis between an open and a
closed position, and for rotating said first panel perpendicularly with respect
to the second panel between reversible positions.

20. The system of claim 19 wherein said first panel can lie on top of said second panel
in two types of positions, a first type wherein the ink pad is enclosed between the first and
second panels, and a second type wherein the ink pad is exposed to the exterior environment.
